The coming financial apocalypse and what government and individuals can do to insulate themselves against the worst shocks In this controversial book a noted adherent of Austrian School of Economics theories advances the thesis that the United States is fast approaching the end stage of the biggest asset bubble in history. He describes how the bursting of the bubble will cause a massive interest rate shock that will send the US consumer economy and the US government pumped up by massive Treasury debt into bankruptcy, an event that will send

shockwaves throughout the global economy. Michael Pento examines how policies followed by both the Federal Reserve and private industry have contributed to the impending interest rate disaster and highlights the similarities between the US and European debt crisis. But the book isn't all doom and gloom. Pento also provides well-reasoned solutions that, government, industry and individuals can take to insulate themselves against the coming crisis. Paints an alarmingly vivid picture of the massive interest rate shock which soon will send consumers and the government into bankruptcy Backed by a wealth of historical and economic data, Pento explains how the bubble was created and what the U.S. can do to mitigate the impending crisis Provides investors with sound strategies for protecting themselves and their assets against the coming

As discussed in this text, countries with excess energy resources export these to countries that need them. This is an important function of the global energy markets, where energy sources, products and services are traded among countries and companies. While this is the primary activity in energy markets, it is only part of the entire global energy market scheme. The goal of this text is to analyze all sides of the energy markets in their physical, technological, economic, political, regulatory, environmental, financial, and legal aspects.

In Designing Stock Market Trading Systems Bruce Vanstone and Tobias Hahn guide you through their tried and tested methodology for building rule-based stock market trading systems using both fundamental and technical data. This book shows the steps required to design and test a trading system until a trading edge is found, how to use artificial neural networks and soft computing to discover an edge and exploit it fully. Learn how to build trading systems with greater insight and dependability than ever before Most trading systems today fail to incorporate data from existing research into their operation. This is where Vanstone and Hahn's methodology is unique. Designed to integrate the best of past research on the workings of financial markets into the building of new trading systems, this synthesis helps produce stock market trading systems with unrivalled depth and
