Hi EngineeringStudents. I'm a current CS major taking computer architecture, and I love boolean algebra. I've been scouring google and libgen for resources such as "practical applications of boolean functions". I want to be able to think of a problem and create a function that represents the inputs and outputs.

## Practical applications of boolean functions ...

Here  $f$  maps each length- $n$  binary vector, or string, into a single binary value, or bit. Boolean functions arise in many areas of computer science and mathematics. Here are some examples: † In circuit design, a Boolean function may represent the desired behavior

Thomas W. Cusick, Pantelimon Stănică, in Cryptographic Boolean Functions and Applications, 2009. A Boolean function  $f(x)$  in  $n$  variables is said to satisfy the Strict Avalanche Criterion (SAC) if changing any one of the  $n$  bits in the input  $x$  results in the output of the function being changed for exactly half of the  $2^{n-1}$  vectors  $x$  with the changed input bit. The SAC is a useful property for a Boolean function in cryptographic applications because satisfying the SAC means that a slight ...

In recent decades, Boolean networks (BN) have emerged as an effective mathematical tool to model not only computational processes, but also several phenomena in science and engineering. For this reason, the development of the theory of such models has become a compelling need that has attracted the interest of many research groups in recent years.
