Building microservices with ASP.NET Core (without MVC) There are several reasons why it makes sense to build super-lightweight HTTP services (or, despite all the baggage the word brings, “ microservices ”). I do not need to go into all the operational or architectural benefits of such approach to system development, as it has been discussed a lot elsewhere.

Building microservices with ASP.NET Core (without MVC ...

Building Microservices Using ASP.NET Core Microservices are small, modular approach to create small services that can run on its own process. Traditional monolithic style application architecture has already coupled all their functionalities into one service. Please enable Javascript to correctly display the contents on Dot Net Tricks!

Building Microservices Using ASP.NET
Core

ASP.NET Core is a collection of small, modular components that can be plugged into your application to let you build web applications and microservices. Within ASP.NET Core you will find APIs for routing, JSON serialization, and rigging up MVC controllers and views. Historically, ASP.NET came with the .NET Framework—you could not separate the two.

1. ASP.NET Core Primer - Building Microservices with ASP ...

Description. You will learn how to build Microservices on .Net platforms which used Asp.Net Web API, Docker, RabbitMQ, Ocelot API Gateway, MongoDB, Redis, SqlServer, Entity Framework Core, CQRS and Clean Architecture implementation.
