A more recent study reported that HIV testing in clinical settings is cost-saving by using a model with consistent, standardized methods of evaluating the costs and effects of established and emerging HIV prevention strategies. 4 The unit cost of testing was adjusted by the positivity rate of persons tested (0.6%), drawn from reports of HIV testing at CDC-funded sites, to derive a cost per new diagnosis. The estimated cost per case of HIV prevented for testing in clinical settings was less ...

Allocation Case Study 1 CDC ' s single largest investment in HIV prevention and a central component of its HIV prevention strategy is providing funding to health departments. i The funding cycle that began in Fiscal Year (FY) 2012 represented a new direction in achieving a higher level of impact with every federal HIV prevention dollar.

HIV Prevention Programs | HIP Case Studies | CDC

CDC recently published research findings external icon that estimate the window period for 20 U.S. Food and Drug Administration (FDA)-approved HIV tests. The study showed that laboratory testing using antigen/antibody tests detects HIV infection sooner than other available tests that detect only antibodies. If a person gets a laboratory-based antigen/antibody test on blood plasma less than 45 days after a possible HIV exposure and the result is negative, follow-up testing can begin 45 days ...
