Trauma and exposure to toxic and infectious agents invariably lead to organ damage followed by significant morbidity and mortality. Although these conditions have typically been associated with the battlefield, today they are more prevalent in urban areas. The events of September 11, 2001 have brought this problem to the forefront of national and international concern. The demand for solutions is justifiably high, and the research community needs to adjust its efforts appropriately. Combat Medicine is meant to be a concise manual for the young clinical or basic investigator who is studying organ injury following trauma or toxic or infectious assaults either in an urban or battlefield setting, with an emphasis on current research issues in emergency and military medicine. The aim of Combat Medicine is to inspire surgical and medical residents and fellows, as well as biology and biochemistry students and fellows, to pursue research careers in the fields of military, trauma, and emergency medicine. Combat Medicine is not intended to be an exhaustive review; rather it is an introduction to key principles of this field.

Trauma and exposure to toxic and infectious agents invariably lead to organ damage followed by significant morbidity and mortality. Although these conditions have typically been associated with the battlefield, today they are more prevalent in urban areas. The demand for solutions is justifiably high, and the research community needs to adjust its efforts appropriately. Combat Medicine is meant to be a concise manual for the young clinical or basic investigator who is studying organ injury following trauma or toxic or infectious assaults either in an urban or battlefield setting, with an emphasis on current research issues in emergency and military medicine. The aim of Combat Medicine is to inspire surgical and medical residents and fellows, as well as biology and biochemistry students and fellows, to pursue research careers in the fields of military, trauma, and emergency medicine. Combat Medicine is not intended to be an exhaustive review; rather it is an introduction to key principles of this field.

The ability to save lives in war, conflicts, and humanitarian interventions requires sophisticated skills above and beyond first aid. Today's Combat Medic must be an expert in emergency care, force health protection, limited primary care, and warrior skills. The Combat Medic Field Reference provides easy access to essential information on triage, treatment, and US Army procedures. This handy pocket-sized reference features waterproof pages for making temporary or permanent notes.

This resource addresses all aspects of combat amputee care ranging from surgical techniques to long-term care, polytrauma and comorbidities such as traumatic brain injury and burns, pain management, psychological issues, physical and occupational therapy, VA benefits, prosthetics and adaptive technologies, sports and recreational opportunities, and return to duty and vocational rehabilitation.

Revision of: Tactical medicine essentials / John E. Campbell...[et. al.]. c2002.

Out of the Crucible: How the U.S. Military Transformed Combat Casualty Care in Iraq and Afghanistan edited by Arthur L. Kellermann, MD and MPH, and Eric Elster, MD is now available by the US Army, Borden Institute. This comprehensive resource, part of the renowned Textbooks of Military Medicine series, documents one of the most extraordinary achievements in the history of American medicine - the dramatic advances in combat casualty care developed during Operations Enduring Freedom and Operation Iraqi Freedom. Each chapter is written by one or more military health professionals who played an important role in bringing the advancement to America's military health system. Written in plain English and amply illustrated with informative figures and photographs, Out of the Crucible engages and informs the American public and policy makers about how America's military health system, devised, tested and widely adopted numerous inventions, innovations, technologies that collectively produced the highest survival rate from battlefield trauma in the history of warfare.

?“Here in Combat Medic we see a bright and talented young physician transformed into a front line battlefield medic in the greatest battle of WWII, the Normandy Invasion. In this personal reflection, his heart and courage are played out with genuine humanity.” —Dianne Feinstein, United States Senator “It is with great pleasure that I learned through the office of the President of the French Republic of your nomination to the rank of Chevalier in the French Legion of Honor.” —Guy Wildenstein, President, the American Society of the French Legion of Honor “Dr. Kerner is a physician's physician...the history of a gifted scholar, teacher, administrator, and most important of all, doctor.” —The Honorable Barbara Boxer, United States Senator “Combat Medic is a page turner... It is a miracle that I have this manuscript to read, that you lived to write it.” —Professor Barth Marshall, USF, Fromm Institute A decorated medical officer's harrowing and insightful portrait of war on the battlefield from northern France to Germany. More than fifty years after the carnage at Normandy, Dr. John Kerner draws from his wartime journals and letters home to present a candid and insightful portrait of war. Medical units under his charge pushed through western Europe, improving on the treatment and transportation of the wounded during some of the most brutal fighting of the war. Amidst the mud and blood of combat, this decorated medical officer shares a time and place when living beyond each day was in serious question. Kerner's account includes some of the greatest moments of World War II: the dramatic breakout of the Normandy hedgerow country, the thrilling dash across France in 1944, and the exhilarating siege of Bastogne during the Battle of the Bulge. Kerner's achievement of saving lives, often with improvised methods and shells flying overhead, is a gripping account of man's noble humanity in the midst of horrifying inhumanity. John A. Kerner, M.D., is a distinguished leader of the San Francisco medical community and former chief of obstetrics, gynecology and reproductive sciences at Mount Zion Medical Center, and a University of California San Francisco clinical professor of obstetrics and gynecology. Dr. Kerner was one of seven American WWII veterans awarded the French Legion of Honor by French president Nicolas Sarkozy at the home of the US French ambassador in Washington DC, November 2007. Dr. Kerner lives in San Francisco, CA.

This highly readable text details the findings of an exhaustive series of studies of Israeli combat veterans, documenting the effects of combat stress reaction on mental and physical health, social interaction, and military effectiveness. It provides mental health professionals, trauma victims, and military personnel with an unparalleled source of information, and offers a unique perspective of contemporary Israeli culture.

A medical textbook containing ultrasound guided techniques to localize the cricothyroid membrane. Physicians, Medical students, other healthcare workers and students can learn the basic anatomy related to cricothyroid membrane and new techniques to localize the cricothyroid membrane using diagnostic ultrasound scanners. The mastery of these techniques contained in this book can help the Medical Practitioner in localizing the cricothyroid membrane with high precision in the emergency room or critical care or prehospital clinical setting in order to perform the cricothyroidotomy for the definitive management of emergent airway obstructions.
