The Case For Stoves Danieli Corus Hot Blast Stoves

Danieli Corus hot blast stoves have a proven service life of over 30 years, surpassing the lifetime capability of most blast furnace designs. This makes selection of this hot blast stove technology a once-in-a-lifetime decision. The hot blast systems used by the global steel industry operate according to a regenerative heat-exchange process. The cyclic nature of this process imposes highly dynamic conditions on the refractory design.

Danieli Corus to build new hot blast stove 47 for SSAB Oxelösund Second contract for hot blast stove technology after successful rebuild project at SSAB... November 26th, 2018

Home / Danieli Corus

Danieli Corus received an order from SSAB for the LSTK construction of the new, internal combustion chamber-type hot blast stove 47 for its blast furnace #4 in Oxelösund, Sweden. This new stove is an addition to the existing hot blast system which currently comprises four internal combustion chamber-type stoves.

Danieli Corus to build new hot blast stove 47 for SSAB ...

The Danieli Corus Blast Furnace design based on copper plate coolers and high-conductivity graphite refractories offers the longest campaign life capability. 6/115. The blast furnace is a high-temperature, pressurized counter-current reactor with dynamic process conditions. The main challenges in blast furnace ironmaking are currently related to lower coke rates, higher fuel-injection rates, high oxygen rates, high productivity and lower-quality raw materials of varying supply.
