CEH: Ethylene Glycols. Apr 2020. Over the last decade, new monoethylene glycol (MEG) capacities have started up in cost-advantaged regions (Middle East) or where demand has been booming (Northeast Asia), while other regions have rationalized their MEG capacity (Europe and Japan). In the Middle East, the abundance of competitively priced ethane has provided a significant cost advantage for regional ethylene and ethylene derivative manufacturers, creating the foundation for the most ...

Traditionally, ethylene glycol production depends heavily on crude oil. But coal-based ethylene glycol production costs about 16% less than the oil-to-ethylene glycol process. This made the industry appear promising for China because of abundant coal reserves and low coal prices. However, when crude prices fell below \$50 a barrel in recent ...

IHS CHEMICAL Chemical Economics Handbook

Ethylene glycol is produced from ethylene (ethene), via the intermediate ethylene oxide. Ethylene oxide reacts with water to produce ethylene glycol according to the chemical equation: $C_2H_4O + H_2O \rightarrow HO-CH_2CH_2-OH$. This reaction can be catalyzed by either acids or bases, or can occur at neutral pH under elevated temperatures. The highest yields of ethylene glycol occur at acidic or neutral pH with a large excess of water.

Ethylene glycol is a clear, sweet, slightly viscous liquid that boils at 198 ° C (388.4 ° F). Its most common use is as an automotive antifreeze. A 1:1 solution of ethylene glycol and water boils at 129 ° C (264.2 ° F) and freezes at - 37 ° C (- 34.6 ° F), serving as an excellent coolant in automotive radiators. Ethylene glycol is highly poisonous; animals or humans that drink the solution become very ill and may

Ethylene glycol is a clear, colorless syrupy liquid. The primary hazard is the threat to the environment. Immediate steps should be taken to limit its spread to the environment. Since it is a liquid it can easily penetrate the soil and contaminate groundwater and nearby streams.

Product Overview Diethylene glycol butyl ether (DGBE) is a type of glycol ether. It is primarily used as a solvent in coatings, inks, cleaners and specialty fluids, or to produce diethylene glycol butyl acetate.¹ It evaporates slowly and is completely water soluble.² Dow sells DGBE under the trade name Butyl CARBITOL™ solvent.
