~~All points $z = x+iy$ of the complex plane which form the circumference of the circle of radius p about the centre $y = i+i$ are characterized by the equation $(x-i)^2+(y-i)^2 = p^2$. Writing the left-hand side as $|z-i|^2=|(-i)(z-i)|$ we obtain the equation of the circle in the form~~

~~[Geometry of Complex Numbers on JSTOR](#)~~

~~For our purposes it is expedient to represent the point (x, y) by the complex number $z = x + iy$ where $i = \sqrt{-1}$. We call $x = \text{Re } z$ the real part, $y = \text{Im } z$ the imaginary part of z ; also $z = x - iy$ is the conjugate, and $|z| = \sqrt{x^2 + y^2} = r$ is the modulus or absolute value of z .~~
