||This is a story she needed to tell; and the rest of the country needs to listen.|| **|| New York Times Book Review ||**This vital memoir will change how we look at the opioid crisis and how the media talks about it. A deeply moving and emotional read, STRUNG OUT challenges our preconceived ideas of what addiction looks like. **||Stephanie Land, New York Times bestselling author of Maid** In this deeply personal and illuminating memoir about her fifteen-year struggle with heroin, Khar sheds profound light on the opioid crisis and gives a voice to the over two million people in America currently battling with this addiction. Growing up in L.A, Erin Khar hid behind a picture-perfect childhood filled with excellent grades, a popular group of friends and horseback riding. After first experimenting with her grandmother's expired painkillers, Khar started using heroin when she was thirteen. The drug allowed her to escape from pressures to be perfect and suppress all the heavy feelings she couldn't understand. This fiercely honest memoir explores how heroin shaped every aspect of her life for the next fifteen years and details the various lies she told herself, and others, about her drug use. With enormous heart and wisdom, she shows how the shame and stigma surrounding addiction, which fuels denial and deceit, is so often what keeps addicts from getting help. There is no one path to recovery, and for Khar, it was in motherhood that she found the inner strength and self-forgiveness to quit heroin and fight for her life. Strung Out is a life-affirming story of resilience while also a gripping investigation into the psychology of addiction and why people turn to opioids in the first place.

In this sequel to the acclaimed Damned Lies and Statistics, which the Boston Globe said "deserves a place next to the dictionary on every school, media, and home-office desk," Joel Best continues his straightforward, lively, and humorous account of how statistics are produced, used, and misused by everyone from researchers to journalists. Underlining the importance of critical thinking in all matters numerical, Best illustrates his points with examples of good and bad statistics about such contemporary concerns as school shootings, fatal hospital errors, bullying, teen suicides, deaths at the World Trade Center, college ratings, the risks of divorce, racial profiling, and fatalities caused by falling coconuts. More Damned Lies and Statistics encourages all of us to think in a more sophisticated and skeptical manner about how statistics are used to promote causes, create fear, and advance particular points of view. Best identifies different sorts of numbers that shape how we think about public issues: missing numbers are relevant but overlooked; confusing numbers bewilder when they should inform; scary numbers play to our fears about the present and the future; authoritative numbers demand respect they don't deserve; magical numbers promise unrealistic, simple solutions to complex problems; and contentious numbers become the focus of data duels and stat wars. The author's use of pertinent, socially important examples documents the life-altering consequences of understanding or misunderstanding statistical information. He demystifies statistical measures by explaining in straightforward prose how decisions are made about what to count and what not to count, what assumptions get made, and which figures are brought to our attention. Best identifies different sorts of numbers that shape how we think about public issues. Entertaining, enlightening, and very timely, this book offers a basis for critical thinking about the numbers we encounter and a reminder that when it comes to the news, people count'in more ways than one.

Award-winning journalist and New York Times bestselling author Gerald Posner reveals the heroes and villains of the trillion-dollar-a-year pharmaceutical industry and delivers ||a withering and encyclopedic indictment of a drug industry that often seems to prioritize profits over patients (The New York Times Book Review). Pharmaceutical breakthroughs such as antibiotics and vaccines rank among some of the greatest advancements in human history. Yet exorbitant prices for life-saving drugs, safety recalls affecting tens of millions of Americans, and soaring rates of addiction and overdose on prescription opioids have caused many to lose faith in drug companies. Now, Americans are demanding a national reckoning with a monolithic industry. ||Gerald's dogged reporting, sets Pharma apart from all books on this subject|| (The Washington Standard) as we are introduced to brilliant scientists, incorruptible government regulators, and brave whistleblowers facing off against company executives often blinded by greed. A business that profits from treating ill's can create far deadlier problems than it cures. Addictive products are part of the industry's DNA, from the days when corner drugstores sold morphine, heroin, and cocaine, to the past two decades of dangerously overprescribed opioids. Pharma also uncovers the real story of the Sacklers, the family that became one of America's wealthiest from the success of OxyContin, their blockbuster narcotic painkiller at the center of the opioid crisis. Relying on thousands of pages of government and corporate archives, dozens of hours of interviews with insiders, and previously classified FBI files, Posner exposes the secrets of the Sacklers' || rise to power||revelations that have long been buried under a byzantine web of interlocking companies with ever-changing names and hidden owners. The unexpected twists and turns of the Sackler family saga are told against the startling chronicle of a powerful industry that sits at the intersection of public health and profits. ||Explosively, even addictively, readable!|| (Booklist, starred review). Pharma reveals how and why American drug companies have put earnings ahead of patients.

Revised and updated edition that analyses how the Office of National Drug Control Policy employs statistics to misleadingly claim the War on Drugs is a success. First published in 2007, Lies, Damned Lies, and Drug War Statistics critically analyzed claims made by the Office of National Drug Control Policy (ONDCP), the White House agency of accountability in the nation's drug war since 1989, as found in the six editions of the annual National Drug Control Strategy between 2000 and 2005. In this revised and updated second edition of their critically acclaimed work, Matthew B. Robinson and Renee G. Scherlen examine seven more recent editions (2006||2012) to once again determine if ONDCP accurately and honestly presents information or intentionally distorts evidence to justify continuing the drug war. They uncover the many ways in which ONDCP manipulates statistics and visually presents that information to the public. Their analysis demonstrates a drug war that consistently fails to reduce drug use, drug fatalities, or illnesses associated with drug use; fails to provide treatment for drug-dependent users; and drives up the prices of drugs. They conclude with policy recommendations for reforming ONDCP's use of statistics, as well as how the nation fights the war on drugs. Praise for the First Edition ||Lies, Damned Lies, and Drug War Statistics is surprisingly easy to read, and Robinson and Scherlen have done a huge favor not only to critics of current drug policy by compiling this damning critique of ONDCP claims, but also to anyone interested in how data is compiled, presented, and misused by bureaucrats attempting to guard their domains. It should be required reading for members of Congress.|| **|| Drug War Chronicle Book Review ||**The authors have performed a valuable service to our democracy with their meticulous analysis of the White House ONDCP public statements and reports. They have pulled the sheet off what appears to be an official policy of deception using clever and sometimes clumsy attempts at statistical manipulation. This document, at last, gives us a map of the truth.|| **|| Mike Gray, author of Drug Crazy: How We Got into This Mess and How We Can Get Out ||**Robinson and Scherlen make a valuable contribution to documenting how ONDCP fails to live up to basic standards of accountability and consistency.|| **|| Ethan Nadelmann, Executive Director, Drug Policy Alliance**

No More Lies details the life and struggles of Dr. Ayla Schbley from his own perspective. Despite the verbose and ornate writing style, Dr. Schbley manages to pack his autobiography with meaningful action. As you progress through No More Lies it becomes apparent that Dr. Schbley is detailing a life that most could never imagine to be real. No More Lies is one of the most believable works to portray the sanguine activities of a modern day James Bond story. This post humus work has been completed by Dr. Schbley's wife: Dr. Bassima Schbley. Ayla Schbley is survived by his wife Bassima and his two sons Sean and Oliver. ***** I have always referred to Ayla as the "real James Bond" as he had all the traits, special skills/talents, training, courage, smarts, and physical capabilities of such a movie hero as James Bond was. But Ayla was for real and Bond was not. Don Stone Special Agent (Retired) United States Drug Enforcement Administration
