1. Bones, Muscles, and Skin 2. Food and Digestion 3. Circulation 4. Respiration & Excretion 5. Fighting Disease 6. The Nervous System 7. The Endocrine System and Reproduction

Fundamentals of Human Biology and Health gives students a solid understanding of how human cells, tissues, organs, organ systems, and whole organisms operate. Designed to be used on its own or as a supplement to other texts, the material includes clear, concise information covering the main physiological systems in the human body, their interconnections, and what individuals can do to maintain healthy bodies and lifestyles. The text explores how and why we study biology, and where human beings fit into the amazing diversity of life. There is also coverage of basic chemistry as it relates to the study of biology. After a tour of the typical human cell, the text provides information on different tissues and organ systems. This includes relevant disorders, diseases, drugs, nutrition, and various health issues. Subsequent material addresses genetics, evolution, ecology, and conservation. Fundamentals of Human Biology and Health provides basic information in an accessible way. This text can be used in any introductory general or human biology course. The accessible language is appropriate for both high school and college level students. It can also be used in courses on anatomy and physiology.

Presents an introduction to motion, force, and energy.

1. Bones, Muscles, and Skin 2. Food and Digestion 3. Circulation 4. Respiration & Excretion 5. Fighting Disease 6. The Nervous System 7. The Endocrine System and Reproduction

One of the most important features of this laboratory manual is the infusion of thinking and problem solving skills with the content areas. Activities and questions within an exercise build on previously learned information and encourage students to transfer information from one section of the course to another. All content and problem solving goals are accomplished by using a simple, non-threatening approach to the lessons. Even students with little science background are able to get involved and master the material. These exercises are cost effective and affordable. Typical schools will have most of the equipment needed to perform the experiments. Each exercise is designed for use in a three-hour laboratory period, but can be easily adapted to accommodate two-hour or ninety-minute sessions. To provide maximum flexibility for instructors, each exercise is broken down into several activities. Activities can be deleted or presented as demonstrations without diminishing the value of the remaining components. Many activities throughout the manual are suitable for use in online sections.

Dan Chiras's Human Biology continues to present the latest information on the structure, function, health, and disease of the human body in a modernized ninth edition. This acclaimed text explores the world from the cellular level, followed by a look at tissues and organs before progressing to a discussion of humans within the environment. Dr. Chiras discusses the scientific process in a thought-provoking way that challenges students to become deeper, more critical thinkers. The focus on health and homeostasis allows students to learn key concepts while assessing their own health needs and learning how to implement a healthy lifestyle. The logical organization, relatable topics, and outstanding pedagogical features, make Human Biology, Ninth Edition a refreshing and engaging resource for undergraduate, non-majors.

"Detailed drawings with thorough explanations of complex biology concepts and systems; New sections with memorization techniques, charts, and quick reference guides throughout; An easier and better way to learn biology.
