Cross lengthening of hips and shins is a two-steps procedure. It is conditioned by the reason that because of relative crookitude of Ilizarov's device, the simultaneous lengthening of both hips is very uncomfortable procedure for the patient. That's why we lengthen shin and crossing (contralateral) hip during first stage.

Distraction osteogenesis (DO), also called callus distraction, callotasis and osteodistraction, is a process used in orthopedic surgery, podiatric surgery, and oral and maxillofacial surgery to repair skeletal deformities and in reconstructive surgery. The procedure involves cutting and slowly separating bone, allowing the bone healing process to fill in the gap.

~~Distraction osteogenesis — Wikipedia~~
