In 1979, Edward P. Alexander's Museums in Motion was hailed as a much-needed addition to the museum literature. In combining the history of museums since the eighteenth century with a detailed examination of the function of museums and museum workers in modern society, it served as an essential resource for those seeking to enter to the museum profession and for established professionals looking for an expanded understanding of their own discipline. Now, Mary Alexander has produced a newly revised edition of the classic text, bringing it the twenty-first century with coverage of emerging trends, resources, and challenges. New material also includes a discussion of the children's museum as a distinct type of institution and an exploration of the role computers play in both outreach and traditional in-person visits.

Here is a complete introduction to the history of museums, types of museums, and the key roles that museums play in the twenty-first century. Following an introductory chapter looking at what a museum is today, Part I looks at the history and types of museums: art and design museums natural history and anthropology museums science museums history museums, historic houses, interpretation centers, and heritage sites botanical gardens and zoos children's museums The second part of the book explores the primary functions of museums and museum professionals: to collect to conserve to exhibit to interpret and to engage to serve and to act The final chapter looks at the museum profession and professional practices. Throughout, emphasis is on museums in the United States, although attention is paid to the historical framing of museums within the European context. The new edition includes discussions of technology, access, and inclusivity woven into each chapter, a list of challenges and opportunities in each chapter, and "Museums in Motion Today," vignettes spread throughout the volume in which museum professionals provide their perspectives on where museums are now and where they are going. More than 140 images illustrate the volume.

New Museum Theory and Practice is an original collection of essays with a unique focus: the contested politics and ideologies of museum exhibition. Contains 12 original essays that contribute to the field while creating a collective whole for course use. Discusses theory through vivid examples and historical overviews. Offers guidance on how to put theory into practice. Covers a range of museums around the world: from art to history, anthropology to music, as well as historic houses, cultural centres, virtual sites, and commercial displays that use the conventions of the museum. Authors come from the UK, Canada, the US, and Australia, and from a variety of fields that inform cultural studies.

This reader brings together 35 seminal articles that reflect the museum world's ongoing conversation with itself and the public about what it means to be a museum—one that is relevant and responsive to its constituents and always examining and reexamining its operations, policies, collections, and programs. In conjunction with the editor's introductory material and recommended additional readings these articles will help students grasp the essentials of the dialogue and guide them on where to turn for further details and developments.

In this volume of 29 essays, Weil's overarching concern is that museums be able to "earn their keep"—that they make themselves matter—in an environment of potentially shrinking resources. Also included in this collection are reflections on the special qualities of art museums, an investigation into the relationship of current copyright law to the visual arts, a detailed consideration of how the museums and legal system of the United States have coped with the problem of Nazi-era art, and a series of delightfully provocative training exercises for those anticipating entry into the museum field.

Through international cases studies, essayists in Museums in a Global Context: National Identity, International Understanding consider the politics of museum interpretation in the global context, issues of cultural patrimony and heritage tourism, the risks of crossing boundaries and borders to present controversial subjects, and strategies for engaging audiences and communities.

Long regarded as one the leading texts in museology, Introduction to Museum Work is now thoroughly revised and updated. While citing recent changes in the museum world, the third edition of Burcaw's classic work retains its useful philosophical orientation and convenient summary format. All the basics of museology are here—the central issues are discussed and definitions are given for all the terms museum workers need to know. Every chapter includes practical exercises making Burcaw's book ideal for the classroom or for novice museum workers. Accepted by the Documentation Center of the International Conference of Museums as exemplary of museum training, Introduction to Museum Work is used as a basic text in museum studies all over the world.
