As the required textbook for NAEMTUs worldwide prehospital trauma life support courses, this is the definitive resource for learning basic and advanced prehospital trauma skills and concepts. Now revised and expanded to cover all aspects of military prehospital trauma with 12 new chapters, this edition is tailored expressly for the military.

Créé en 1983 par l'Association américaine des techniciens médicaux d'urgence (NAEMT) et le Collège américain des chirurgiens, le PHTLS (Prehospital Trauma Life Support) représente la version pré-hospitalière de la certification ATLS (Advanced Trauma Life Support). Fondé sur le concept de l'évidence basée médecine et mis à jour tous les quatre ans, il constitue une ressource d'informations globale pour la gestion des patients traumatisés en pratique pré-hospitalière. Cet ouvrage, traduction de la 6e édition américaine du PHTLS, devenu un ouvrage de référence internationale, privilégie l'efficacité par son approche pédagogique originale. Il permet aux intervenants d'affiner leur capacité à évaluer rapidement et précisément l'état de gravité d'un patient, puis de développer une stratégie thérapeutique selon le principe du "traiter en premier ce qui tue en premier". Une importance particulière est accordée à l'anatomie, la physiologie et la physiopathologie, ainsi qu'à l'évaluation et la prise en charge des différents types de traumatismes. Cette nouvelle édition, qui intègre désormais des modifications et enrichissements en lien avec les pratiques françaises, comprend : des cahiers illustrant étape par étape les techniques de gestion des voies aériennes, de ventilation et de stabilisation du rachis ; des algorithmes et iconographies relatifs à l'évaluation du patient et à sa prise en charge. Entièrement actualisée et largement enrichie, elle offre au lecteur 5 nouveaux chapitres concernant : les brûlures ; la gestion des catastrophes ; les armes de destruction massive ; la tactique civile de soutien médical d'urgence ; le secours en milieu isolé. Cet ouvrage intéresse tous les intervenants impliqués dans les situations d'urgence pré-hospitalières, particulièrement les médecins, infirmiers, sapeurs-pompiers, ambulanciers et secouristes.

James Stewart's CALCULUS texts are widely renowned for their mathematical precision and accuracy, clarity of exposition, and outstanding examples and problem sets. Millions of students worldwide have explored calculus through Stewart's trademark style, while instructors have turned to his approach time and time again. In the Seventh Edition of SINGLE VARIABLE CALCULUS, Stewart continues to set the standard for the course while adding carefully revised content. The patient explanations, superb exercises, focus on problem solving, and carefully graded problem sets that have made Stewart's texts best-sellers continue to provide a strong foundation for the Seventh Edition. From the most unprepared student to the most mathematically gifted, Stewart's writing and presentation serve to enhance understanding and build confidence. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

The Tactical Emergency Casualty Care Course Manual is the printed component for the NAEMT's 16-hour continuing education Tactical Emergency Casualty Care (TECC) Course. It may be used by both instructors and students as a resource to prepare for the TECC course and as a reference that discusses the current best practices for EMS providers to utilize in the response to and care of patients in a civilian tactical environment. The TECC Course does not offer certification as a tactical medic it is intended to teach all EMS providers the best patient care and safety practices in a civilian tactical environment, such as an active shooting hostile event. Composed of 10 lessons, The TECC Course Manual will: Cover the phases of care in a civilian tactical environment, Describe step-by-step the life-saving skills that may be performed in a civilian tactical environment, Provide safety and survival strategies for EMS providers and their patients In addition to the TECC Course Manual, instructors may also purchase the TECC Online Instructors Toolkit (9781284483888). This resource features 10 lesson presentations in PPT, as well as interactive patient simulations and skill stations that allow students to gain experience in a safe environment monitored by experienced EMS providers.

Instructor CD contents include: Precourse materials -- Course materials -- Evaluation materials -- Resources.

This book was written for both the military and civilian tactical medic in order to prepare them for tactical paramedic certification (TP-C). It also provides the reader with valuable descriptions and demonstrations of crucial medical procedures.

Welcome to the new gold standard in critical care transport training. Published in conjunction with the American Academy of Orthopaedic Surgeons (AAOS) and the American College of Emergency Physicians (ACEP), Critical Care Transport offers cutting edge content relevant to any healthcare provider training in critical care transport. Like no other textbook in this market, Critical Care Transport thoroughly prepares medical professionals to function as competent members of a critical care team by covering the material that everyone—paramedics, nurses, physicians, and specialty crew—needs to know to operate effectively in the prehospital critical care environment. This book meets the curricula of major critical care training programs, including University of Maryland, Baltimore County (UMBC). It covers both ground and flight transport, and meets the objectives of critical care transport certification exams such as the Certified Flight Paramedic (FP-C) exam administered by the Board for Critical Care Transport Paramedic Certification. Content includes information specific to prehospital critical care transport, such as flight physiology, lab analysis, hemodynamic monitoring, and specialized devices such as the intra-aortic balloon pump. Standard topics such as airway management, trauma, and pharmacology are covered in the context of critical care. Chapters have been authored by leading critical care professionals across the country and represent the most current, state-of-the-art information on management of critical care patients.

Every year, thousands of emergency medical service vehicle collisions cause significant injury, death, and property damage—underscoring the need for emergency vehicle operator course training. Emergency Medical Services Vehicle Operator challenges EMS providers to consider if they truly know how to arrive safely. This comprehensive course addresses the knowledge gap that leads to injuries and deaths, explains the need for dedicated vehicle operator education, and provides close-up profiles and analyses of typical—"preventable"—crashes. In addition, each print copy of Emergency Medical Services Vehicle Operator includes an access code that unlocks a complete eBook and flashcards.

Tactical Combat Casualty Care (TCCC) has saved hundreds of lives during our nation's conflicts in Iraq and Afghanistan. Nearly 90 percent of combat fatalities occur before a casualty reaches a medical treatment facility. Therefore, the prehospital phase of care is needed to focus on reducing the number of combat deaths. However, few military physicians have had training in this area and, at the onset of hostilities, most combat medics, corpsmen, and paramedics personnel in the U.S. military have been trained to perform battlefield trauma care through civilian-based trauma courses. These courses are not designed for the prehospital combat environment and do not reflect current practices in the area of prehospital care. TCCC was created to train Soldiers and medical personnel on current best practices for medical treatment from the point of injury to evacuation to Role 3 facilities
