Following the popular style and format of other textbooks by Stewart Clegg, this brand new co-authored textbook on project management provides a much needed European perspective to the subject. Drawing on the latest research and practice, the authors guide students on an active learning journey through the project lifespan, promoting a critical and reflexive approach to studying project management, as well as one that creates value for all project stakeholders and emphasizes people and not just process. Case studies and examples discussed in the text cover a wide range of projects from large to smaller across different industries and sectors, both public and private, including: megaprojects (HS2); mega events (Olympics); political projects (Brexit); health-related project implementation (LEAN); tech-related projects (Google); building and restoration projects (housing/Sagrada Familia); and arts and cultural projects (European Capital of Culture). Incorporating a host of learning features both in chapters and via the supporting online resources, this textbook is essential reading for all students/managers completing a course unit in project management at either undergraduate or postgraduate level.

Managers in social work and social care contexts are required to manage a wide range of projects: long-term and short-term, on large and small scales, in partnership with other agencies, and covering a broad range of issues and contexts. Management of these projects requires specific expertise, and this book sets out what these core skills are and how they can be achieved. Topics such as managing resources, assessing risks, and measuring outcomes are covered, as well as how to start and end a project. The authors acknowledge the values and ethics inherent to care environments, as well as the business skills necessary for good management. Detailed case studies demonstrate the ideas in action, and reflective activities, practical tools and action checklists are included throughout. This practical handbook provides a clear and comprehensive guide to how to be an excellent project manager, and is a must-read for all social work and social care managers and post-qualifying social work and social care students.

This volume provides rich insight into the nature and practice of media management. Contributions assess the degree to which management of media firms requires a unique set of skills, highlighting similarities and differences of media firms compared with other industries in terms of management practices, HR development and operational aspects. Dimensions for future research are considered along with practical implications for media managers and corporate structures. The book serves as a valuable reference for researchers, advanced students and practitioners in media industries.

Much of project management writing addresses only the basics of time, cost, and scope management (or people and organizational issues) and fails to address the day-to-day nuances that become so important in practice. The reality is that there is far more than this to managing projects successfully. The Wiley Guides to Project Management contain not only well-known and wisely used basic project management practices but also new, cutting-edge concepts in the broader theory and practice of managing projects. The series will consist of edited guides, each devoted to a sub-topic area under the umbrella of Project Management. The first four volumes will cover: Project, Program, and Portfolio Management; Project Control; Organization and Project Management Competencies; and Project Technology Management, Supply Chain, and Procurement. Other books will be added as needed. Each volume will be edited by Peter W.G. Morris, & Jeffrey K. Pinto and will contain 300 to 400 pages, with 12 to 15 contributions drawn from both academia and industry. The books will address critical, need-to-know information that will help professionals successfully manage projects in most businesses and help students learn the best practices of the industry. The first book in this series, Project, Program, and Portfolio Management is based on the "meta" level of management, understanding and exploiting strategic management of projects, portfolios, and program management, stakeholders, and PFI.
