There are two major regions of coral reef development recognized; the Indo-Pacific (which includes the Pacific and Indian Oceans as well as the Red Sea), and the tropical western Atlantic (also known as the "wider" or "greater" Caribbean). Each of these two regions contains its own unique coral reef fish fauna with no natural overlap in species.

## ~~List of Fish Species — Fish Photos~~

By Todd Gardner. The carangidae is a family of tropical and warm-temperate, marine fishes found in warm seas throughout the world. Commonly known as jacks, the carangids display a wide range of body shapes, from the standard fusiform (the quintessential "fish" shape) seen in the amberjacks, to extremely deep-bodied, compressed forms exemplified by the lookdowns.
