In order to defend themselves against commoditization and disruptive innovation, leading companies are now gaining competitive advantage through networked business models and tapping into talent from outside their company. Rather than implementing rigid "built-to-last" processes, organizations are now constructing more fluid "built-to-adapt" networks in which each member focuses on its differentiation and relies increasingly on its partners, suppliers, and customers to provide the rest. With contributions by the biggest names in business network transformation, this book offers cutting edge research and an in-depth exploration of critical topics such as customer value, supply networks, product leadership, global processes, operations, innovation, relationship management, and IT. The book also provides practical guidance for successfully engaging in BNT, and is filled with illustrative case studies from some of the world's largest and most successful companies. It contains the vital information business leaders need to enable their companies to deliver faster innovation to customers at lower cost by sharing investments, assets, and ideas across their business networks. An essential resource for all business leaders, Business Network Transformation shows how to transform any business network to achieve competitive advantage and increase the bottom line. Contributors include Geoffrey Moore, Philip Lay, Marco Iansiti, Mohan Sawhney, Ranjay Gulati, David Kletter, Venkat Venkatraman, John Hagel III, John Seely Brown, Gautam Kasthurirangan, Randall Russell, Henry Chesbrough, Jeffrey Dyer, and Andrew McAfee.

This supplement text bridges the gap between the fundamentals of how businesses operate (processes) and the tools that business people use to accomplish their tasks (systems). The authors have developed this text for an introductory MIS or general business course to establish a fundamental understanding of business processes. Business students, regardless of their functional discipline, will be able to apply the real-world concepts discussed in this text immediately upon entering the workforce. As more and more businesses adopt enterprise systems globally, it becomes increasingly important for business schools to offer a process-based curriculum to better reflect the realities of modern business. Given the integration of business operations and enterprise systems, Magal and Word have designed this text to reflect, in a practical and accessible format, how real-world business processes are managed and executed.
