including: usage; crop-specific residue limits; hazard ratings for long-term human toxicity; and endocrine disruptor and reproductive toxicity information. Every chemical profile contains references and web links to source information from the EPA, OSHA, the World Health Organization (WHO), and other important advisory and lawmaking bodies. This work is focused on regulated chemicals. The substances covered include pesticides, insecticides, herbicides, fungicides, rodenticides and related agricultural chemicals used on foods grown and produced for both human and animal consumption. These products are organized with common names, chemical synonyms, trade names, chemical formulae, US EPA pesticide codes, EU regulations including Hazard Symbol and Risk Phrases, EINECS, RTECS, CAS, and other unique identifiers so that all who may have contact with, or interest in them can find needed information quickly. A comprehensive reference for the agricultural sector, food industry, agrochemical manufacturing and distribution sector, and first responders Brings together a wealth of hazard and response, regulatory and toxicological information in one convenient go-to handbook Covers US, EU and worldwide regulatory requirements

Sittig's Handbook of Pesticides and Agricultural Chemicals is specifically designed for use by those engaged in the agricultural and food processing industries, both vital to our nation's health and economy. People in every phase of food production, from the farm to the fork, will find a wealth of material here. It will also be of interest to professionals in the pharmaceutical, cosmetics, and personal care industries who use agricultural products as ingredients. It provides crop, chemical, regulatory, health and safety information on nearly 800 pesticides, fertilizers, and other agricultural chemicals. These chemicals are organized withg unique identifiers so that all who may have contact with or interest in them can find critical information quickly.

For more than a quarter century, Sittig's Handbook of Toxic and Hazardous Chemicals and Carcinogens has proven to be among the most reliable, easy-to-use and essential reference works on hazardous materials. Sittig's 5th Edition remains the lone comprehensive work providing a vast array of critical information on the 2,100 most heavily used, transported, and regulated chemical substances of both occupational and environmental concern. Information is the most vital resource anyone can have when dealing with potential hazardous substance accidents or acts of terror. Sittig's provides extensive data for each of the 2,100 chemicals in a uniform format, enabling fast and accurate decisions in any situation. The chemicals are presented alphabetically and classified as a carcinogen, hazardous substance, hazardous waste, or toxic pollutant. This new edition contains extensively expanded information in all 28 fields for each chemical (see table of contents) and has been updated to keep pace with world events. Chemicals classified as WMD have been included in the new edition as has more information frequently queried by first responders and frontline industrial safety personnel. \*Includes and references European chemical identifiers and regulations. \*The only single source reference that provides such in-depth information for each chemical. \*The two volume set is designed for fast and accurate decision making in any situation.

frequently queried by first responders and frontline industrial safety personnel. Sittig ' s Handbook is a globally recognized reference source, providing full listings of the 2,000 most common hazardous chemicals – making it the essential handbook for first-line response to chemical spills and day-to-day chemical plant reference. Entries have a full range of synonyms for each chemical, including trade names, to avoid confusion and enable quick and accurate location of the right information. Authoritative and frequently updated, Sittig provides a fully accurate source of information that engineers and emergency response services look to as a highly dependable reference both for emergencies and day-to-day engineering decisions.

Hazardous Materials Awareness and Operations meets and exceeds the requirements for Fire Fighter I and II certification and satisfies the core competencies for operations level responders including the eight mission-specific responsibilities for first responders within the 2008 Edition of NFPA 472, Standard for Competence of Responders to Hazardous Materials/Weapons of Mass Destruction Incidents. Additionally, the material presented also exceeds the hazardous materials response requirements of the Occupational Safety and Health Administration (OSHA) and the Environmental Protection Agency (EPA).

Presents, for the first time in one volume, a concise treatment of labeling in the chemical industry. This handbook has been designed to provide an in-depth review of, and to act as a source for, the major elements of a hazardous label communication program ù to serve the needs of labor, industry, and the public.

The first book in two decades to address this multi-faceted field, The Toxicology and Biochemistry of Insecticides provides the most up-to-date information on insecticide classification, formulation, mode of action, resistance, metabolism, environmental fate, and regulatory legislation. The book draws on the author ' s groundbreaking research in insect detoxification. It discusses mechanisms at the molecular level such as specific enzymes that contribute to insecticide resistance, the modification of which can change insecticide susceptibility and influence host plant selections in phytophagous insects. Beginning with a general introduction, eleven chapters integrate classical toxicology with physiology, biochemistry, and molecular biology to present a comprehensive look at the field. The book discusses the demand and formulation of pesticides and describes each type from dusts and powders to baits and aerosols. It classifies insecticides by target, chemical compound, and mechanism; evaluates toxicity testing procedures; explains pesticide uptake, mode of action, and metabolism; and explores species differences, resistance, and interactions. It also considers pesticides in the environment and federal and state regulatory legislation and enforcement. A long-awaited, state-of-the-science review on insect toxicology, this indispensable book brings you up-to-date on the many aspects and implications of pesticide use and provides the necessary background and platform from which to conduct future research.

Over the past 50 years, triazines have made a great impact on agriculture and world hunger by assisting in the development of new farming methods, providing greater farming and land use capabilities, and increasing crop yields. Triazines are registered in over 80 countries and save billions of dollars a year. The Triazine Herbicides is the one book that presents a comprehensive view of the total science and agriculture of these chemicals. With emphasis on how the chemicals are studied and developed, reviewed, and used at the agricultural level this book provides valuable insight into the benefits of triazine herbicides for sustainable agriculture. \* Presents previously unpublished information on the discovery, development and marketing of herbicides \* Includes a vital section on the origin, use, economics and fate of triazine herbicides \* Covers benefits of triazines in corn and sorghum, sugarcane, citrus, fruit and nut crops \* Establishes best management practice and environmental benefits of use in conservation tillage

Why are books written? Since I have read many works by my colleagues with admiration, this question has always intrigued me. Further, writing a book takes a

good deal of time and effort, and I had imagined that I would never undertake such a demanding task. A few unexpected events and circumstances have changed my mind. The first was the pleasant experience of editing Environmental Toxicology of Pesticides with Drs. Mallory Boush and Tomomasa Misato. This fine symposium volume occasioned many interesting responses, including a suggestion to prepare a more complete treatise on the grounds that such "proceedings" volumes, by their very nature, do not satisfactorily offer a complete and coherent description of the field, but cater chiefly to specialists. I myself prefer single-authored books for basic understanding of a scientific field. The second circumstance leading to the present volume was the availability of teaching notes from my course on the toxicology of insecticides. As the need to cultivate environmental awareness has increased, there has been a parallel increase in the enrolments of such courses both here and in other major institutions. Yet no comprehensive and up-to-date text has been available. The third factor which facilitated the effort was an especially pleasant sabbatical in Hawaii, where the availability of the excellent Hamilton Library at the University of Hawaii considerably eased my task.

Designed as guidance for emergency management, this manual deals almost entirely with short-term (acute) harmful effects of pesticides. Included is information on the health hazards of pesticides currently in use, along with current consensus recommendations for management of poisonings and injuries caused by them. Formatted for quick reference by through indexing, the book addresses poisoning by insecticides, pesticides, herbicides, fungicides, rodenticides, fumigants, and other solvents, acaricides, repellents, and adjuvants. Indexed by symptoms and signs and by chemical and product names. Illustrated.
