Taking both Zen and Druidry and embracing them into your life can be a wonderful and ongoing process of discovery, not only of the self but of the entire world around you. Looking at ourselves and at the natural world around us, we realize that everything is in constant change and flux - like waves on the ocean, they are all part of one thing that is made up of everything. Even after the wave has crashed upon the shore, the ocean is still there, the wave is still there - it has merely changed its form. The aim of this text is to show how Zen teachings and Druidry can combine to create a peaceful life path that is completely and utterly dedicated to the here and now, to the earth and her rhythms, and to the flow that is life itself.

Developers who want to access USB devices from their embedded systems will find a helpful resource in USB Embedded Hosts: The Developer's Guide. This new book from the author of USB Complete shows how small systems can take advantage of the same wealth of USB devices available to conventional PCs. The book begins with a review of USB host communication protocols. Readers then learn which USB host requirements are relaxed for embedded systems and what new requirements some embedded systems must meet. To help in selecting a development platform, the book explores available hardware and software for USB host communications in small systems. The heart of the book focuses on communicating with USB devices. The topics (with example code) include USB drives, keyboards, virtual serial ports, network bridges, mics, speakers, video cameras, and printers, plus devices that don't fit defined USB classes. Also discussed are systems that support both USB host and device functions. The example code is written for the BeagleBoard-AM open development board using a distribution of Linux targeted to small systems. Also covered is how to use Linux commands and utilities to learn about, monitor, and debug communications with USB devices.
