The Most Dangerous Space Weapons Ever | Space

Space weapons are weapons used in space warfare. They include weapons that can attack space systems in orbit (i.e. anti-satellite weapons), attack targets on the earth from space or disable missiles travelling through space. In the course of the militarisation of space, such weapons were developed mainly by the contesting superpowers during the Cold War, and some remain under development today.

Space weapon - Wikipedia

The Partial Test Ban Treaty and Outer Space Treaty are the major widely accepted international agreements that limit space weapons activity and testing. The Partial Test Ban Treaty of 1963 prohibits

The terrifying space weapons of the future - explosive ...

The militarisation of space involves the placement and development of weaponry and military technology in outer space. The early exploration of space in the mid-20th century had, in part, a military motivation, as the United States and the Soviet Union used it as an opportunity to demonstrate ballistic-missile technology and other technologies having the potential for military application. Outer space has since been used as an operating location for military spacecraft such as imaging and commun

framework of international space law. Among its principles, it bars states party to the treaty from placing weapons of mass destruction in Earth orbit, installing them on the Moon or any other celestial body, or otherwise stationing them in outer space. It specifically limits the use of the Moon and other celestial bodies to peaceful ...

### Outer Space Treaty - Wikipedia

These existing gaps, particularly in the Outer Space Treaty, have thereby paved the way for states to embark on the path of an unchecked deployment of space weapons. While the outer space treaty bans the testing and development of weapons of mass destruction in space, it puts no strictures on the placement, development and employment of other kinetic and non-kinetic weapons in space.
