Your right ventricle is one of four chambers in your heart. It is responsible for pumping blood from your heart to your lungs, where the blood is replenished with oxygen. The left ventricle is responsible for then pumping the oxygenated blood around your body.

What is right ventricular failure? - Heart Matters magazine

In patients with congenital heart disease the right ventricle (RV) may support the pulmonary (subpulmonary RV) or the systemic circulation (systemic RV). During the last 50 years evidence is accumulating that RV dysfunction develops in many of these patients and leads to considerable morbidity and mortality. Therefore RV function in certain groups of congenital heart disease patients needs ...
